

GrowVance™

Pit Manager

Increasing Manure Handling Efficiency and Proficiency

FEATURES AND BENEFITS

- Pit Manager has the potential to reduce ammonia levels, resulting in lower odor.
- Reduces phosphorus lock-up in soil, and protects nitrogen from leaching, volatilization and denitrification.
- Pit Manager improves nutrient distribution in pit and application in the field.
- Keep solids from building up at the bottom of pits.

PRODUCT DETAILS

Product Overview

Pit Manager is a highly effective, water-soluble, and biodegradable manure pit and lagoon treatment designed for hog and cattle operations. Engineered to increase pumpability, reduce solids, and ensure a uniform distribution of manure, Pit Manager optimizes your manure management, saving you time and effort during pump-out.

Key Benefits

- **Improved Uniformity:** Distributes manure nutrients more evenly, enhancing the value of your manure as a fertilizer.
- **Efficient Pump-Out:** Breaks up solids for a smoother, hassle-free pump-out process.
- **Enhanced Agitation:** Boosts agitation efficiency, ensuring optimal pit or lagoon performance.
- **Customizable Application:** Tailor the application rate to your specific needs, whether maintaining low solid buildup or breaking down substantial solids.

Distribution

Ensure equal distribution throughout pit pump-outs for maximum effectiveness.

APPLICATION DIRECTIONS

Use Case	Hog	Cattle
Low Rate	2 Gal of Pit Manager	1.5 Gal of Pit Manager
High Rate	4 Gal of Pit Manager	3 Gal of Pit Manager

*Rate Assumptions: Pit Manager/100k Gal of Manure
Apply 50% of recommended rate when pit is 25-30% full, then apply 25% of recommended rate when pit is 50% full, and apply remaining 25% of recommended rate 30 days prior to pump-out.
Use the high rate for heavier solids buildup (over 12 inches).
